

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

taken for the ultimate re-arrangement of the whole under more worthy conditions.

Baron Ferdinand also bequeathed to the Museum a number of fine manuscripts, but these not being subject to the same conditions as the rest of the bequest, are preserved in the Department of Manuscripts, and will be on exhibition in the Manuscript Saloon on the ground floor of the Museum.

The collection, which is briefly catalogued in the following pages, is of exceptional richness, and of a kind that is only to be obtained by those who possess the amplest resources. In nearly all the classes of works of art of which it is composed there are pieces of the highest quality. The prevailing tone of richness and splendour of colour evidences a taste rather for the fully developed productions of the later Renaissance than for the more severe Gothic or quattro-cento styles, where the artist is fettered by the conventions of an immature art. The Classical period is represented by four examples only, but of these, two beautiful heads in high relief may well claim to be in the first rank, and their refined style shows that they date from the period when art had reached its highest point (No. 1, Pl. I). The serene beauty of these heads places them in quite a different category from the great proportion of the rest of the collection; the only other pieces that are at all comparable with them, though far removed in date, are the two busts which have been fancifully called Charles the Bold and his wife (No. 261).

The series of cups and vases of rock crystal and other hard stones is of a kind for the appreciation of which no special training is required. The brilliancy of the colours, the difficulties surmounted in the laborious hollowing of the intractable materials, and the richness and beauty of the enamelled mountings, are readily understood. Among these one piece stands pre-eminent—the mottled agate vase No. 68 (Pl. IV), of which the body is an example of ancient Roman cameo work while the mounts are in the most elaborate style of the Italian Renaissance, and the whole is in the most perfect state of preservation. The skill of the ancient Roman lapidary was fully equal to that of his later collaborator, though the nature of his material exacted a broader treatment. It is somewhat

rare to find an ancient vase of hard stone so symmetrical and graceful in outline, and it is probably this quality that led the goldsmith of the Renaissance to bestow his skill upon it. Others of these cups claim a classical origin, and it may be that one or two of them are of Roman times, and like this one with enrichments of a much later date, but none has such superlative qualities. Of the other vases, in which the cutting of the stones and the ornamental settings are more or less contemporary, several will repay a close examination, and one at least (No. 79) is notable for bearing the name of Akbar, the great Indian emperor, and was no doubt a gift to him from some European prince.

Closely connected with the crystal cups both by their attractiveness and their technical peculiarities, are the jewels and personal ornaments, and in quality of work, as well as in the rarity of the individual pieces, the two classes are fairly on a level. Here, again, one of the series stands far above the rest, both for its historical interest and for the beauty of the workmanship. This is the Lyte jewel (No. 167, Pl. XI), a superb specimen of the goldsmith's work of the early years of the 17th century, possibly from the hand of George Heriot himself, or it may be even by the painter of the portrait, Hilliard, who, it must be remembered, was a goldsmith as well as a painter. The skilful treatment of the white enamel on the back, with the thin graceful lines of gold, forms an agreeable contrast to the brilliancy of the face of the locket. The portrait of King James within is unusually well preserved, and is a good example of Hilliard's work. The king was so flattered by the pedigree that Mr. Lyte produced, in which the king's ancestry was traced back to Brut, that, as Anthony à Wood says, he gave him "his picture in gold set with diamonds, with gracious thanks." This "picture" was left by a later Thomas Lyte to a daughter, and it finally came into the family of Monypeny, and was sold. It was then purchased by the Duke of Hamilton, and was included in the sale of the Hamilton Palace Collection, where it realised £2835, and passed into the collection of Baron Ferdinand Rothschild. A number of the other jewels are of the kind popularly associated with the name of Cellini; but a comparison of the designs with those of the German engravers of ornament

of the time shows clearly a common origin. One ornament that belonged to Don John of Austria appears to be Italian, and its history bears out the assumption (No. 171). A large number of them, of which No. 149 may be taken as the type, might usefully be compared with the jewels in the Reiche Kapelle at Munich, and with the drawings for such objects made by Hans Mielich and published by Dr. Hefner von Alteneck of Munich.

The enamels are, with one exception, of the later school of Limoges, and most of them date from the second half of the 16th century. The exception is a *chasse* or reliquary (No. 19) of the earliest form of Limoges champlevé enamel, in which the ground is hollowed out with a graver to receive the enamel which is to form the design, while the surface of metal thus left visible is usually gilt and further ornamented with scrolls slightly engraved. The subject is an interesting one, the martyrdom of St. Valérie, the patron of Limoges, where the reliquary was made. A careful comparison of this piece with a fine marriage casket already in the museum collection of enamels has shown that the two are almost without doubt from the same hand; a curious fate that after an interval of six hundred years the two pieces should come together under one roof. The later enamels are principally decorative in character, and the large dishes of Susanne Court (No. 49), Martial Courtois (Nos. 30, 31), and Jean Courtois (No. 33) are very fine examples of these artists. Of the first there are several pieces in the collection, while Martial Courtois, a rare artist, is represented by two. It is curious that one of these, the scarlet woman of the Revelation, is duplicated by one formerly in the Magniac Collection. The portrait of Catherine of Lorraine (No. 24) shows the minute work that was often bestowed by Leonard Limousin on the finish of his larger portraits. Though this portrait was rightly attributed to this artist, both in the Debruge and Spitzer sales, it would seem that the signature had been till now overlooked.

The carvings in wood are of two kinds, one, the microscopic sculptures, the other the portrait busts and panels. The former class cannot fail to excite wonder at the marvellous deftness and patience which enabled the carver to produce on so minute a scale, and usually with so much artistic feeling, the elaborate

and complicated designs. One of the carvings, though it has not the microscopic details of the others, is noteworthy for different reasons. This is the nut-like devotional carving (No. 234) which, besides being about two centuries older than the rest, is also thought to be of English work, while the inherent merits of the design make it a very important monument, though a small one, of the art of an interesting period, the early 14th century. The contorted monsters which form the decoration of one end recall the carvings seen on "misereres" under the seats in cathedral stalls, and it is but rarely that works of this period and style can be found except in connection with ecclesiastical architecture. Unfortunately the seal ring gives no clue by which the original owner of this devotional toy can be traced; the inscriptions upon it would apply to any person, and the ring might well have been bought "ready made."

Of the microscopic carvings in boxwood, two are deserving of note. The first, an elaborate tabernacle, elegant both in general design and in its multitudinous details, is described under No. 233. The arms, motto, and badge on the leather case show that it is connected with the Emperor Charles V. On one side are his paternal arms and the "briquet" badge; on the other the Imperial eagle and his arms as King of Spain. The date of the work, which cannot be far distant from the year 1520, makes it not impossible that the carving was a gift on the accession of Charles to the empire, a purpose fully in keeping with the elaborate character of the work, and the rich mounting of its leather case. The inscription on the bottom, purporting to give the name of the artist, is obviously a later addition, and is besides executed in a rough style altogether foreign to the minute finish of the carving.

The other carving of the same kind of more than ordinary interest is the miniature altar, No. 232. While it bears comparison with any of the others in the minute care with which the details are worked out, it has in addition the virtue of being a satisfactory architectural composition. The proportions are agreeable, and the whole rests solidly and firmly on a base of good design. The semicircle of figures representing the Last Supper is a wonderful example of dignified art on a scale of

unusual minuteness. The date 1511 which appears on this specimen is, no doubt, that at which it was carved. While such carvings occur not unfrequently, yet the total number of them cannot be very great. They all have features in common, and several are without doubt from the same hand. They are frequently called German, and this attribution may be true in some cases; others are certainly Flemish, both in general style and in details, and the coats of arms they bear are often those of Flemish families. It is, therefore, safer to consider them rather to be Flemish than German.

The glass vessels are not numerous, but they include one good example of a mosque lamp (No. 54) of the style typical of the 14th century, which probably came from a mosque at Damascus or Mosul. The other piece of importance is also from the East, and is of a kind more rarely found. This is No. 53, the goblet with richly enamelled figures, set in a mounting of silver gilt, doubtless added in France. The subject is a prince with attendants, executed in a thick enamel on the glass with gilding and outlines in red. The date at which this cup was made cannot be far removed from that of the mosque lamp, and the style of the European mounting is nearly contemporary. The story that it was won at play from a king of France by an ancestor of the Palmer Morewood family, from whom it came, is not confirmed by the present representatives. The form of the glass itself is interesting, as being the earliest known to have been made at the famous glass works at Venice, and it is not unfair to assume that the form, simple as it seems, was derived from the East. An enamelled cup with Christian subjects, the Virgin and Child and an inscription in Lombardic letters, may be seen in the glass-room in the Museum, and the date of this interesting piece cannot be more recent than the 14th century, and it can only have been made in Venice. The arms and armour again are few in number, but among them are several that are worthy of a royal armoury. First of these comes the exquisite damascened shield (No. 5) made in 1554 by Giorgio Ghisi of Mantua, a skilful artist, celebrated for his works of this character as for his engravings on copper. Such a piece of armour was of course only intended to be used at pageants, but

even there the minute groups of figures, worked rather in the taste of the goldsmith than of the armourer, must have been largely thrown away, except as mere surface decoration enhancing the general effect. This wonderful piece was the principal object in the famous collection of Prince Anatole Demidov. A fine sword (No. 12) has the hilt ornamented in a similar style, and a small cabinet (No. 16) of architectural design is also faced with damascened metal, but neither can compare, either in painstaking finish or in condition of the surface, with the Demidov shield. Another style of decoration is seen on the wheel-lock guns (Nos. 8, 9), where the barrels are relieved by scroll work and figures raised and chased out of the solid metal, while the stocks are inlaid with ivory scrolls and panels engraved with scenes from the chase. Such highly ornamented weapons are in curious contrast to the ideal gun of the modern sportsman.

A large and striking part of the collection are the silver standing cups. Many of these display considerable merit in design, and as a whole there can be no doubt of their decorative qualities. The greater number are German, and belong to the last quarter of the 16th century or the beginning of the next, when such table ornaments had assumed large proportions and had acquired a certain freedom of form in marked contrast to the rigid compact designs of the 15th and early 16th centuries. An early French cup (No. 118) set with a number of cameos in shell, is worthy of note, both for the charming quality of the cameos and for the execution of the cup itself. The set of twelve tazzas (No. 97) also is remarkable for the skilful chasing of the embossed designs as well as from the fact that such a set is very rarely seen.

Collections such as that made by Baron Ferdinand Rothschild have always been costly amusements; but it will be increasingly difficult, even for the most wealthy, to gather them in the future. The inevitable rise in prices may not be a deterrent, but the repeated withdrawal from the market of large numbers of fine works of art, such as are to be found here, cannot but have a marked effect in time, though this will probably be only to turn the popular taste for collecting into new channels. But, however this may be, by his bequest to the British Museum Baron

Ferdinand Rothschild, who fully recognised during his life the responsibilities entailed by great wealth, has raised a monument to himself which, while worthily recording his taste and liberality, is also a lasting benefit to all who are interested in the history and development of art.
